LinkedIn · GitHub · Portfolio

Senior Software Engineer with 4+ years building scalable, cloud-native backend systems at Oracle and Salesforce. Specialises in microservices architecture, RESTful API design, and distributed systems, delivering measurable outcomes including 40% reduction in system failures, and 20% improvement in API response times. Proficient in Java, Spring Boot, and Python, with hands-on experience across Oracle Cloud and Kubernetes-based environments.

PROFESSIONAL EXPERIENCE

Salesforce Jan 2026 – Present

Member of Technical Staff — Hyderabad, India

- Delivered Content Variants (in-app translation) enabling locale-driven content rendering via profile-based language selection across Salesforce Marketing channels, supporting 45+ locales for global customers.
- Built an in-browser HTML code editor enabling marketing customers to hand-author and fully customize landing pages and web forms with raw HTML; shipped syntax highlighting, in-editor code search, dynamic personalization tokens with inline editing, custom form embedding within landing pages, and pre-publish validation to catch errors before deployment.
- Developed Google reCAPTCHA (bot/spam protection) and Google Analytics integrations for customer-facing marketing websites, including REST APIs for installation and removal, backend services for configuration and lifecycle management, and a reusable rendering hook that automatically injects required scripts into published pages.

Oracle – Hyderabad, India | May 2021 – Jan 2026

Senior Applications Engineer Sep 2024 – Jan 2026

- Architected and enhanced RESTful APIs for Oracle Cloud HCM, reducing response times by 20% and processing 100K+ monthly transactions across global clients.
- Refactored monolithic services into microservices with SOA principles, enabling independent rollbacks, reducing system failures by 40%, and ensuring 99.9% uptime.
- Integrated Business Rules framework enabling runtime customisation of validation logic for Fortune 500 customers.
- Mentored 5+ engineers, standardised development workflows, and improved team delivery velocity by 15%.

Applications Engineer Jul 2022 – Aug 2024

- Led migration of HCM workflows from legacy Java-based component UI framework to modern JavaScript low-code cloud platform (VBCS), cutting feature release time by 30% and enhancing UI/UX.
- Developed scalable REST APIs for Oracle GHR modules, processing 100K+ transactions monthly across global clients.
- Applied microservices and SOA principles to reengineer backend services, reducing system failures by 40% and ensuring 99.9% uptime.
- Implemented logging and monitoring mechanisms, streamlining bug resolution time by 35%.

Student Intern May 2021 – Jul 2021

- Developed microservices for EZML (ML platform) on OCI using Spring Boot, reducing manual ML setup effort by 60%.
- Designed APIs with Apiary and employed OOP for reusable modules across 3+ OCI components.

PROJECTS

Cloud-Native URL Shortener — *Java, Spring Boot, Redis, PostgreSQL, Docker*

- High-throughput URL shortening service with Redis caching, rate limiting, and analytics dashboard; horizontally scalable to 10K+ req/sec via Docker Compose.

Real-Time Chat Platform — *Java, Spring Boot, WebSockets, React, MongoDB, Docker*

- Scalable real-time messaging app with WebSocket communication, JWT auth, message persistence; supports 500+ concurrent connections per instance.

Distributed Task Scheduler — *Python, FastAPI, Celery, RabbitMQ, Kubernetes, Prometheus*

- Fault-tolerant distributed task scheduling system with dead-letter queues, retry policies, and Prometheus/Grafana monitoring; supports cron and event-driven triggers.

EDUCATION

National Institute of Technology, Calicut 2018 – 2022

Bachelor of Technology, Computer Science and Engineering — GPA: 8.17/10.0

TECHNICAL SKILLS

Languages	Java, Python, C++, JavaScript
Frameworks	Spring Boot, ReactJS, Node.js, Java ADF
Cloud / DevOps	Oracle Cloud (OCI), Docker, Kubernetes, CI/CD, Git
Databases	Oracle DB (PL/SQL), MySQL, Redis, MongoDB, PostgreSQL
Architecture	Microservices, REST APIs, Distributed Systems, Event-Driven, RBAC
Tools	Jira, GitHub, Shell Scripting, Linux, Agile / Scrum

LANGUAGES

English — C1 (Professional)
Telugu — Native
Hindi — B2 (Fluent)
